Genome Data for Clinical Care?

Still Many challenges:

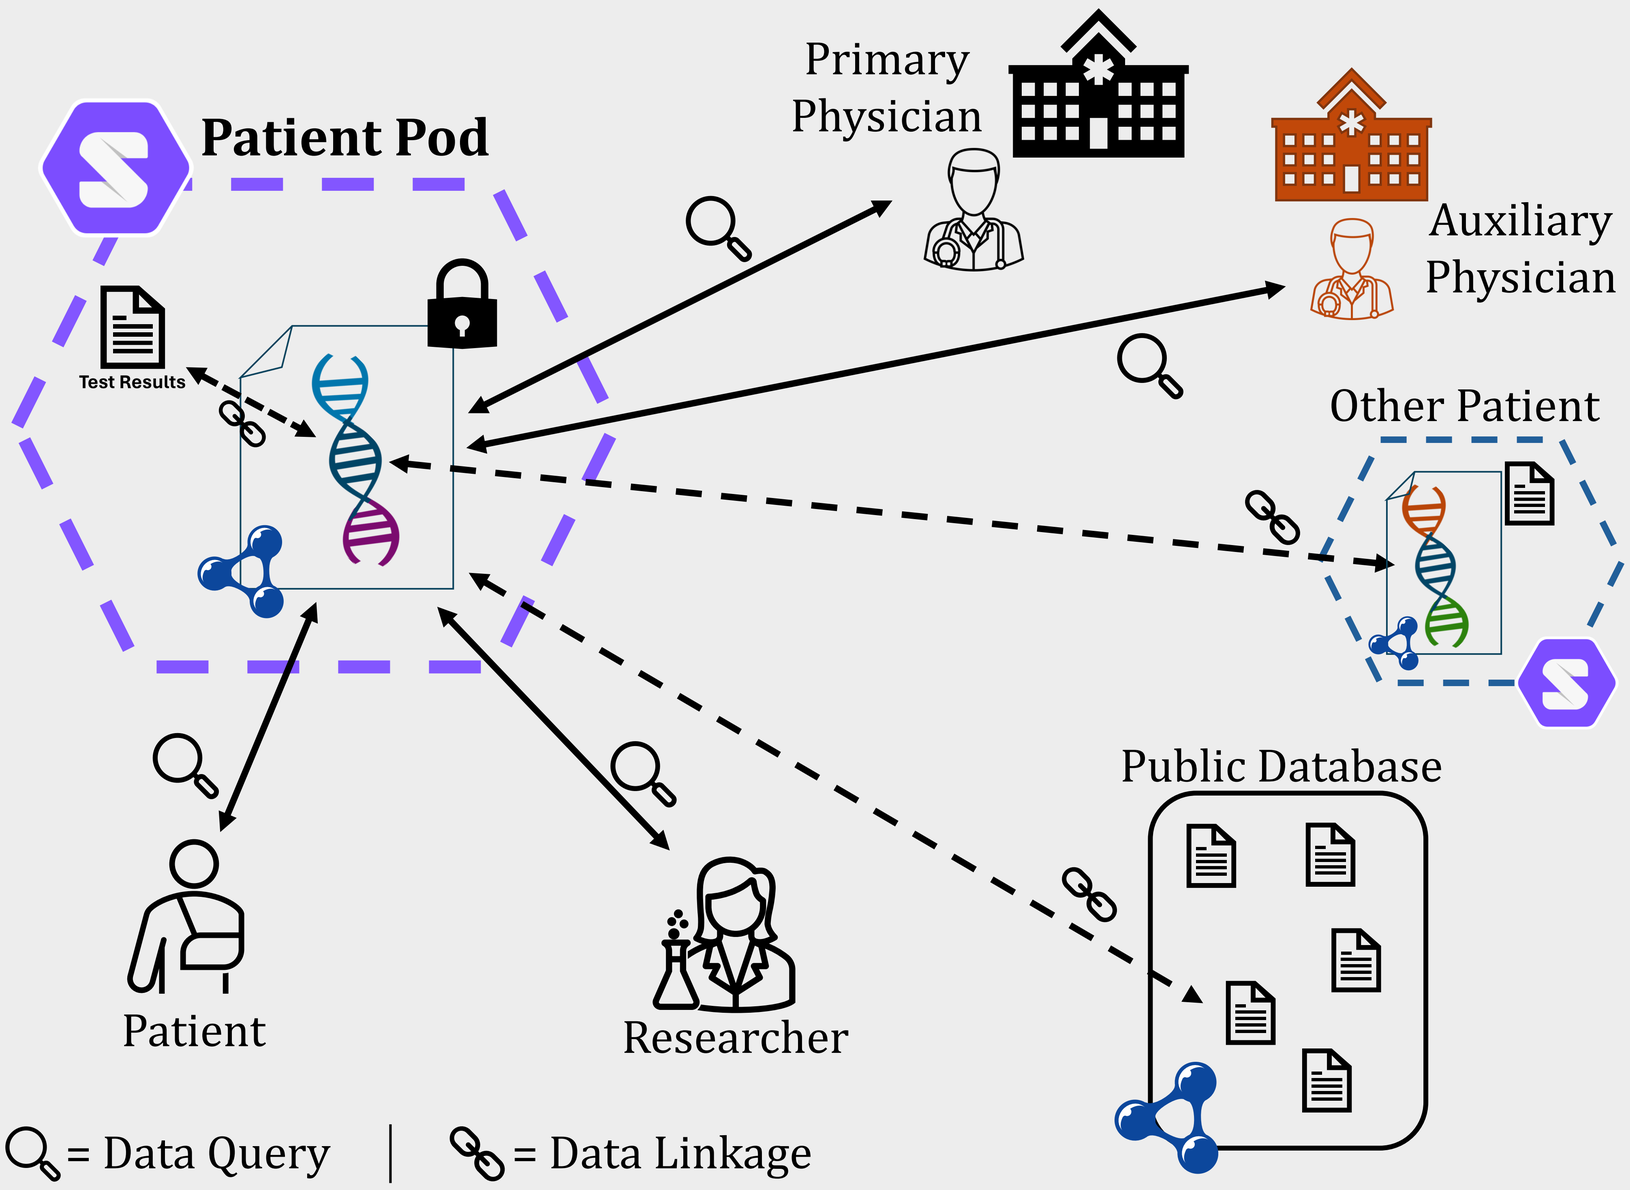
- Storage
- Privacy
- Governance
- Formatting

Could Semantic Web technology help?

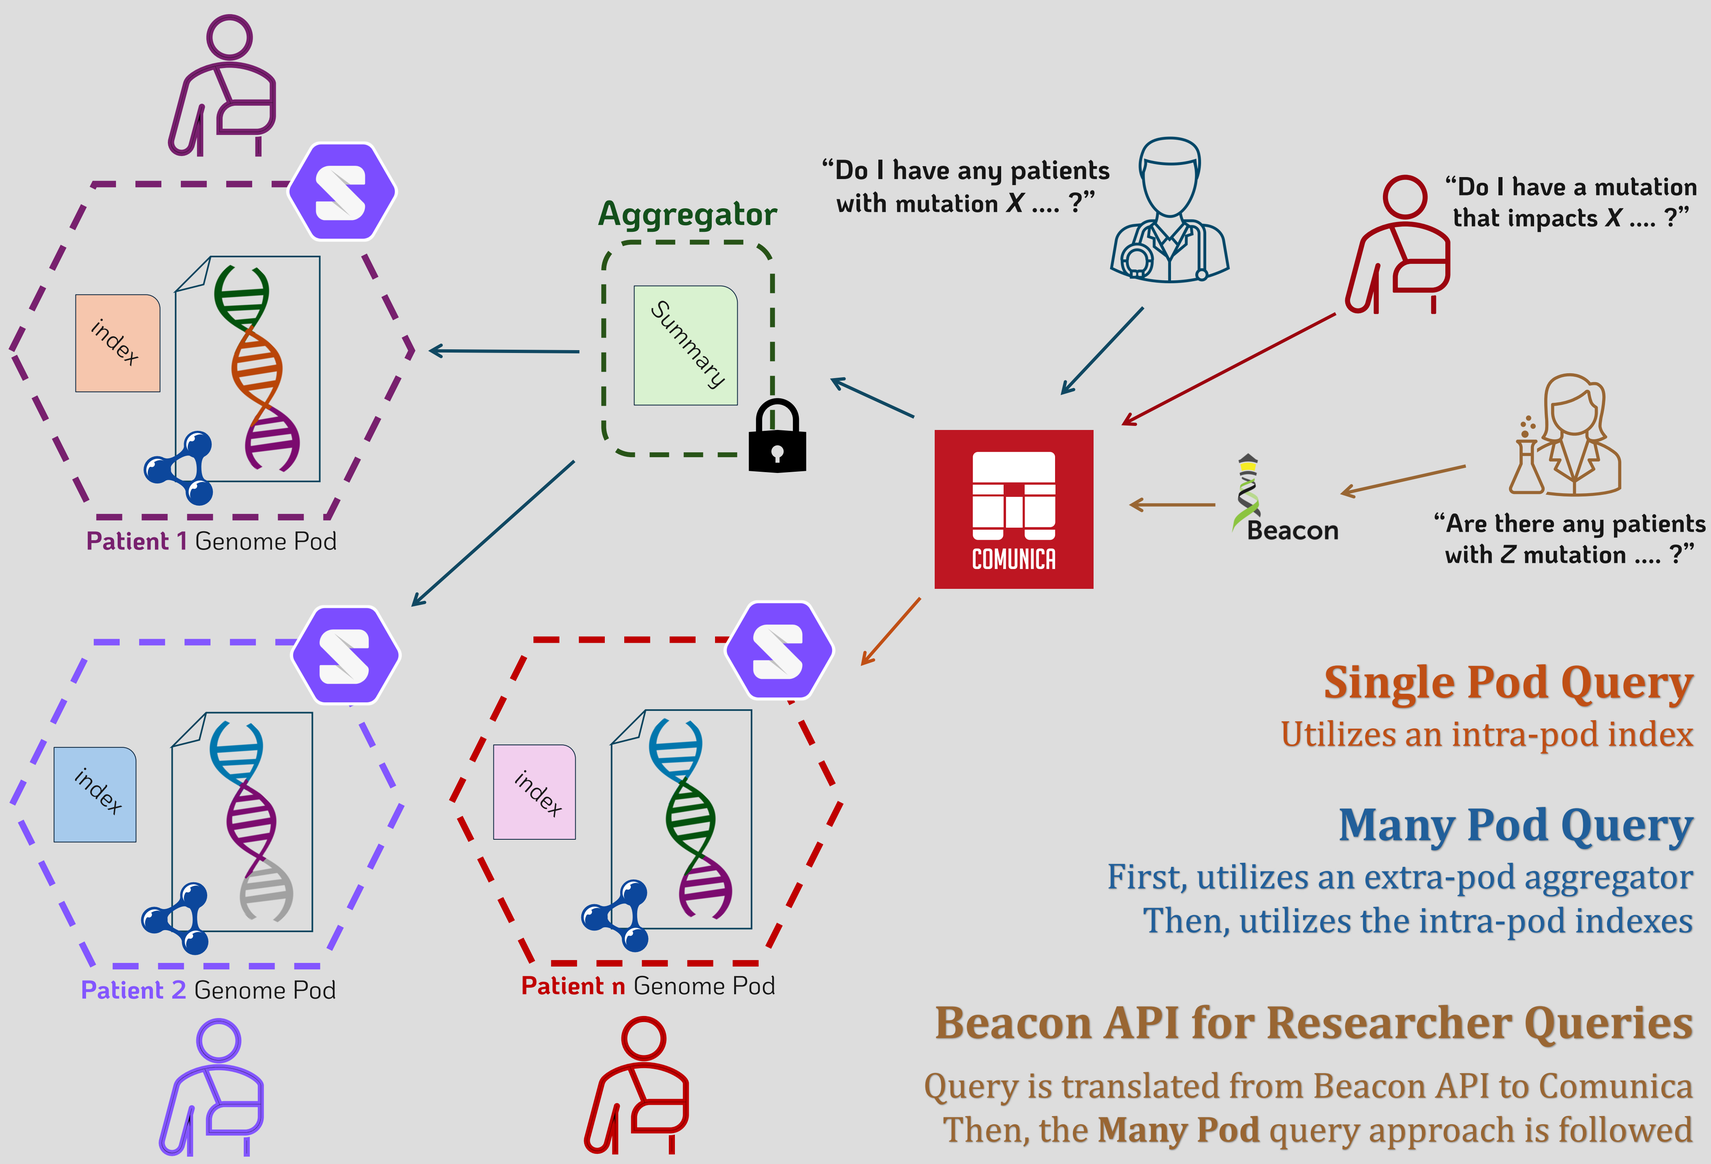
Personal Genome Sequences

- Variant Call Format (VCF)
- Very large (~GBs for one individual)
- Strict privacy protections

A Patient-Centric Storage Approach



An Index-Based Link Traversal Querying Approach



Single Pod Query
Utilizes an intra-pod index

Many Pod Query
First, utilizes an extra-pod aggregator
Then, utilizes the intra-pod indexes

Beacon API for Researcher Queries
Query is translated from Beacon API to Comunica
Then, the **Many Pod** query approach is followed

Research Challenges

Privacy granularity
- Index privacy concerns?
- How granular is adequate?

RDF Conversion + Data Linkages
- VCF to RDF Conversion?
- What data should be linked?
- Automation of data linking?

Querying performance
- Many, large data sources
- Algorithms that use indexes?

Engineering Tasks

- Genomic data storage in Solid pods
- Data privacy management
- Data access via the web

Research Pursuits

- Represent genomic data as RDF?
- Linking genomic and health data?
- Single and Many pod Querying?
