Genome Data

Genome data is big...

~130m

Printed

Human Genome[1]

Ghent Belfry

~91m

Other considerations

- Storage
- Privacy
- Governance
- Formatting

© Crum 2026

Genome Data: One Challenge “Solved”

Genome data is big...

Variant Call Format (VCF) file

- Individual humans exhibit ~3 million mutations (**~125 MBs**)
- VCF file **records only those differences**

~130m

Printed

Human Genome[1]

Ghent Belfry

~91m

Other considerations: ??

Scaling Genome Data Usage

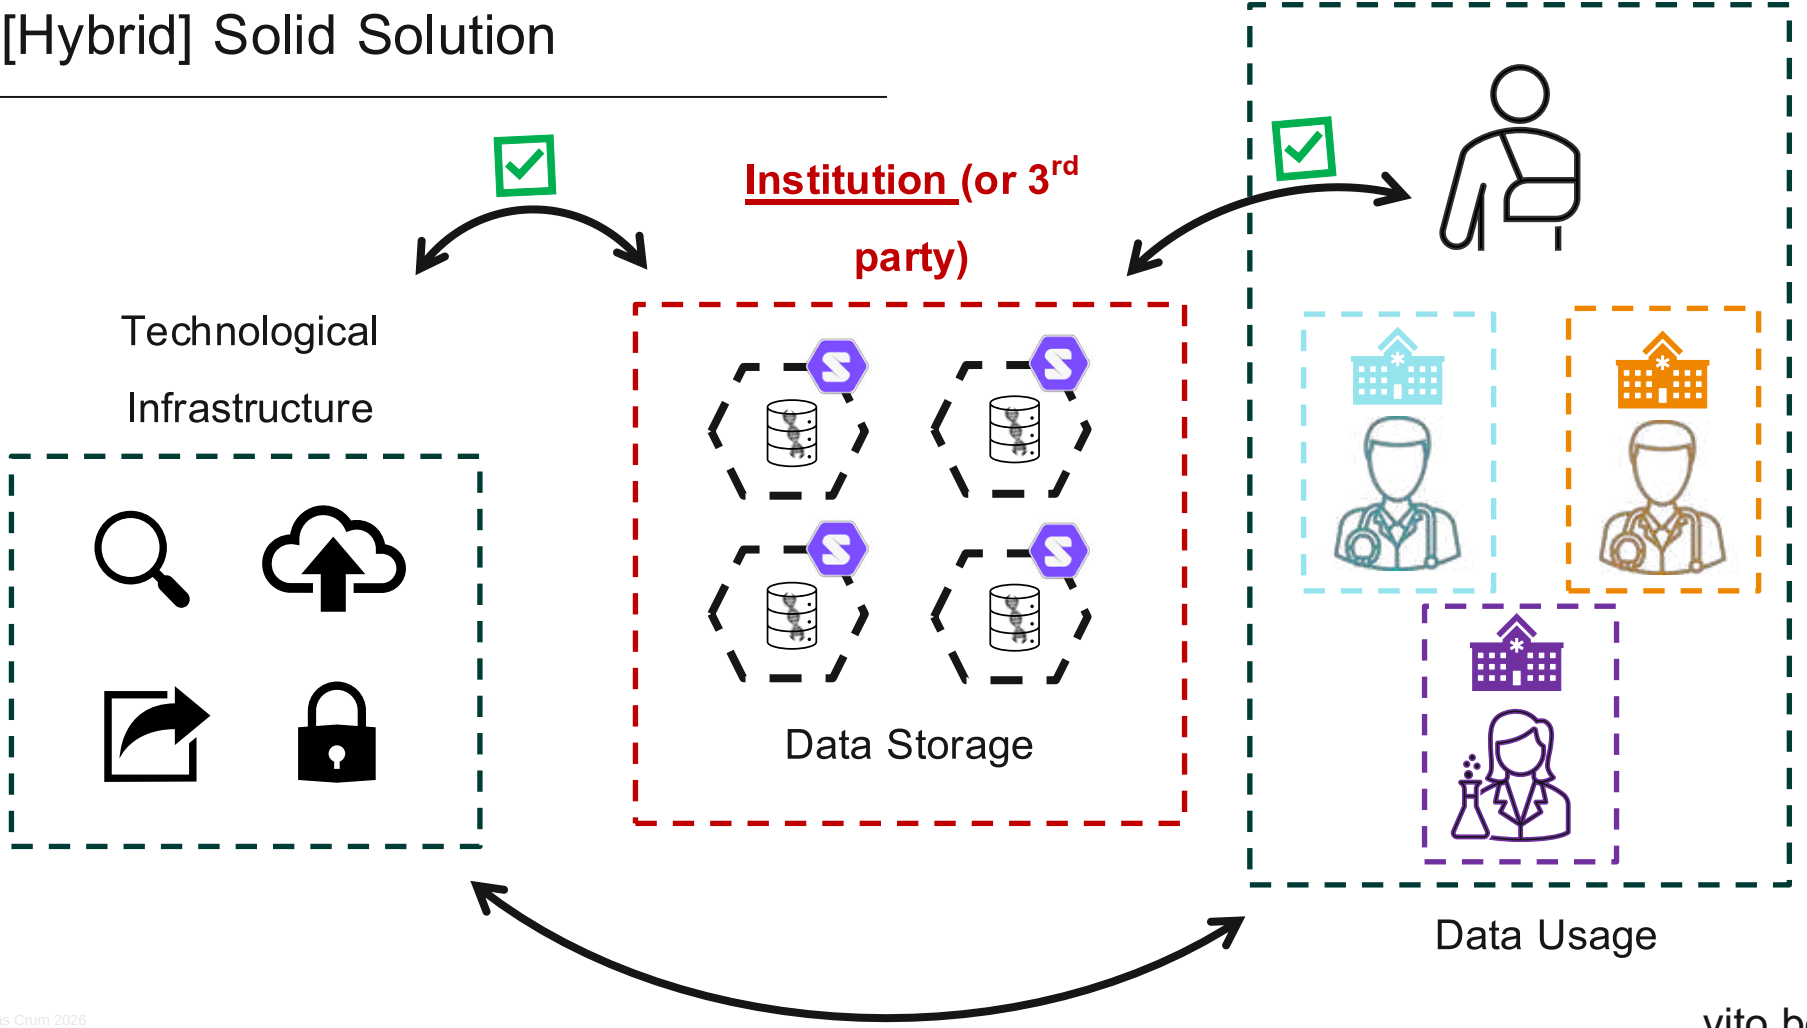
Research genomic data sharing initiatives:

State-of-the-art for **clinical** genomic data sharing?

GDPR (EU) / HIPPA (US) *EU Health Data Spaces* → Not much...

© Elias Crum 2026

A [Hybrid] Solid Solution



© Elias Crum 2026

Solid Technology

- Does not solve ALL problems, but offers an environment where improvements are possible

  - ✓ Easier sharing (web-facilitated)
  - ✓ Granular privacy controls
  - ✓ Direct patient data access
  - ✓ Data representation flexibility (RDF)
  - ✓ Possibility of data-linking and querying

© Elias Crum 2026

Disclaimer & Project Goals

The Genome Pods project is a **RESEARCH** project

It aims to develop a **proof-of-concept**

Framework and **Web Application** for:

- Genomic data storage in Solid Pods
- Granular privacy controls of genomic data
- Genomic data representation in RDF
- Data-linking potential
- Data querying potential (within and across pods)

© Elias Crum 2026

Clinical Example

A patient is hospitalized with DVT

(DVT usually merits the perscription of Warfarin[2])

The physician has just received a pharmacogenomic screening

(produced with the patient's VCF file)

The physician uploads the test results to the patient's Genome Pod

The physician makes the test results visible to the patient's primary care physician

(out of network)

The physician queries his other patients for similar tests

Future Directions

Basic Functionalities:

- Genomic data storage in Solid pods
- Data privacy management
- Data Sharing via the web

Experimental research:

- Represent genomic data as RDF?
- Linking genomic and health data?
- Single and Many pod Querying?

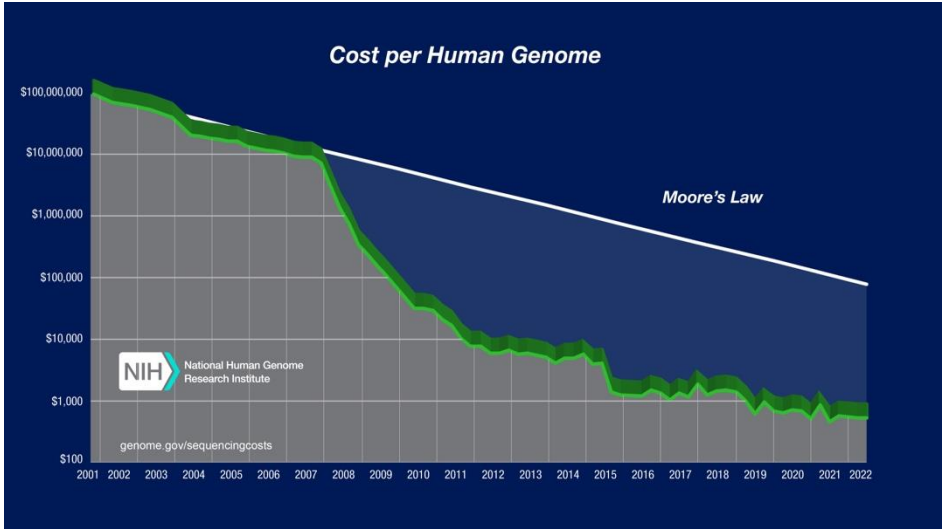
Questions?

Part of the *PErsoNal Genome QUery IN clinical practice (PENGQUIN)* Ph.D. Project

Funding provided by VITO NV (UG_PhD_2303_contract)

Genome Sequencing in Health Care

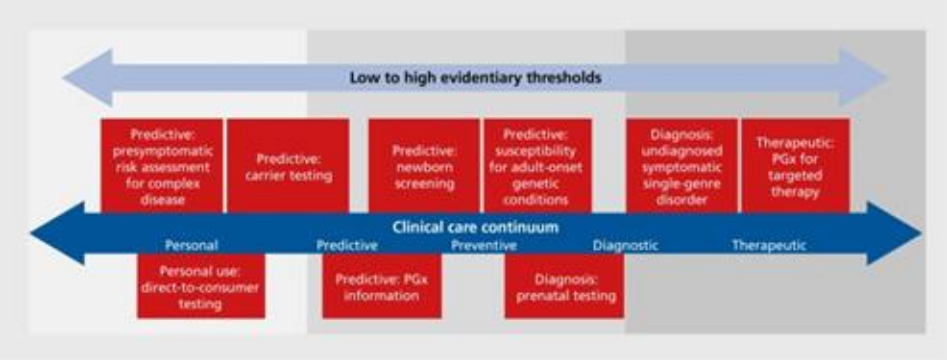
Sequence Generation Costs



Wetterstrand KA. Accessed 12/04/24.

Currently getting close to $100 per genome[4]

Use-cases



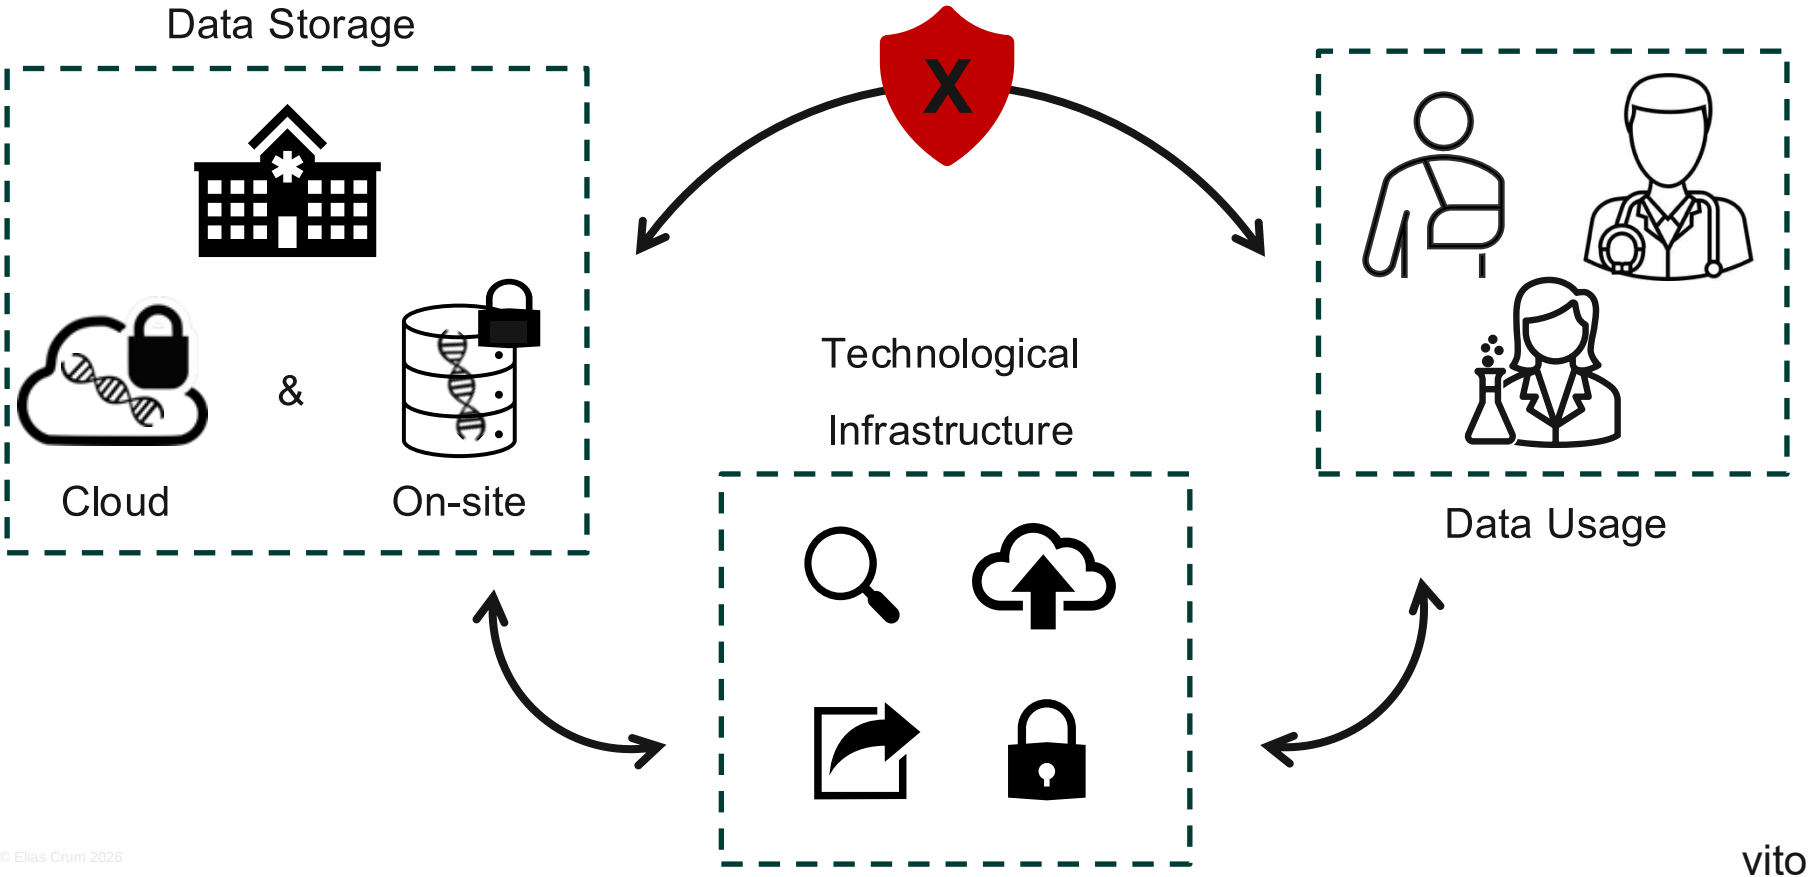
10.31887/DCNS.2016.18.3/jkrier

Examples include:

- Medication prescription (pharmacogenomics)
- Genetic disease screening
- Cancer diagnosis & treatment

© Elias Crum 2026

Genome Data in Health Care



© Elias Crum 2026

Implementation Specifics

Solid pod instances → Community Solid Server

Genomic Data → Publicly available *VCF* data[4]

RDF Conversion → Aim to use SPHN RDF vocabulary

Data-linking → Actively exploring ontologies / methodologies

Data Querying → Custom instance of Comunica
