PENGQUIN:

PErsoNal Genome QUery IN healthcare and clinical practice

Elias Crum

European Semantic Web Conference
Ph.D. Symposium (Early Stage)
May 27th, 2024

© Elias Crum 2024

Outline

Why?

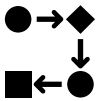

Genomic Data + Semanic Web?

Goals

Reshape how genomic data is stored

How?

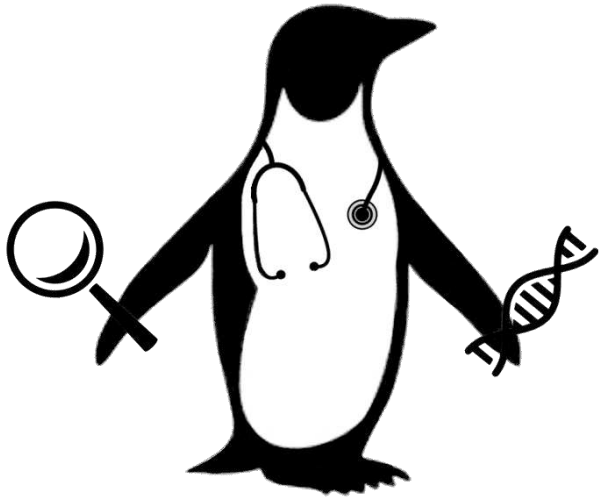

Ph.D. plan introduction

Impacts

Deliverables and goals

© Elias Crum 2024

PENGQUIN

PErsoNal **Genome** QUery IN healthcare and clinical practice

© Elias Crum 2024

Personal Genome Sequence Data

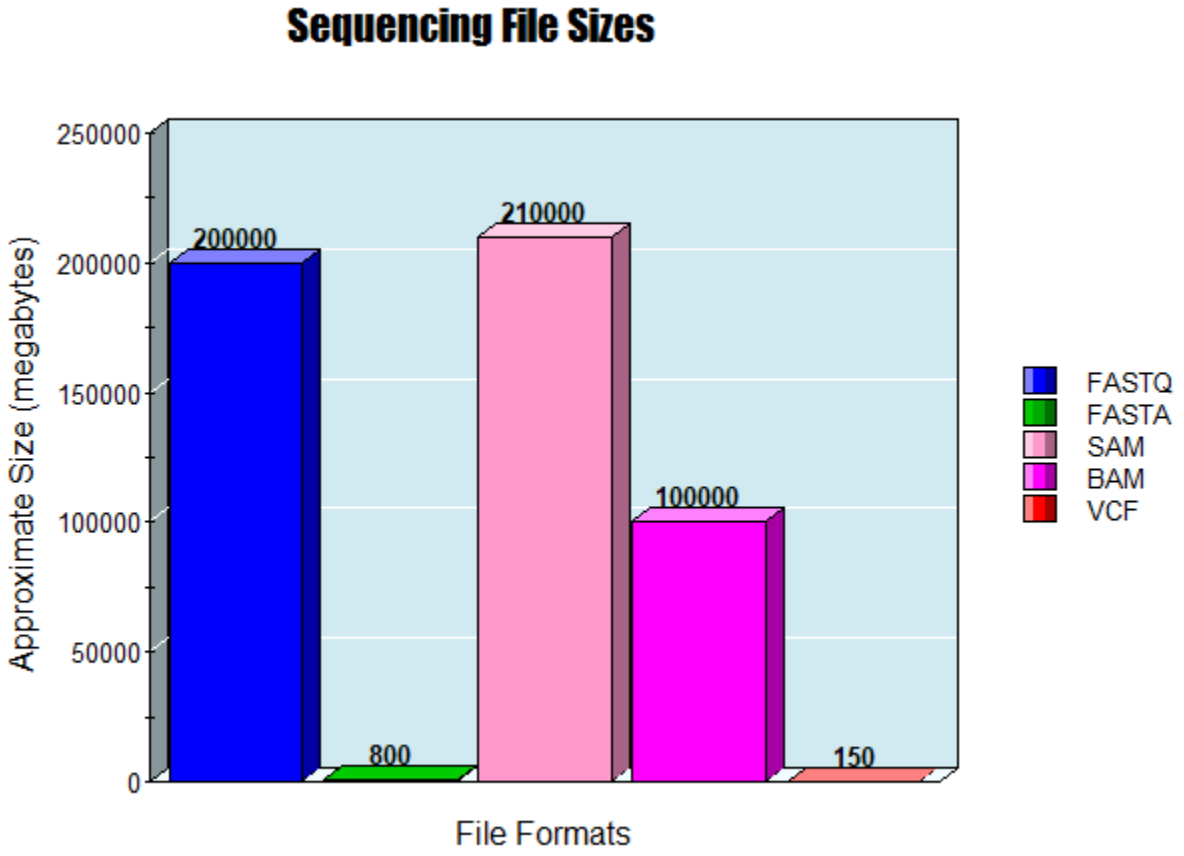

Human genome data is big…

~3.2 BILLION base pairs ----> ~1 GB

Sequencing output file ----> ~200 GB

Variant Call Format (***VCF***) file ----> ~200 MB

- Individual humans exhibit ~3 million mutations
- VCF file **records only those differences**
- Flat file

Other considerations

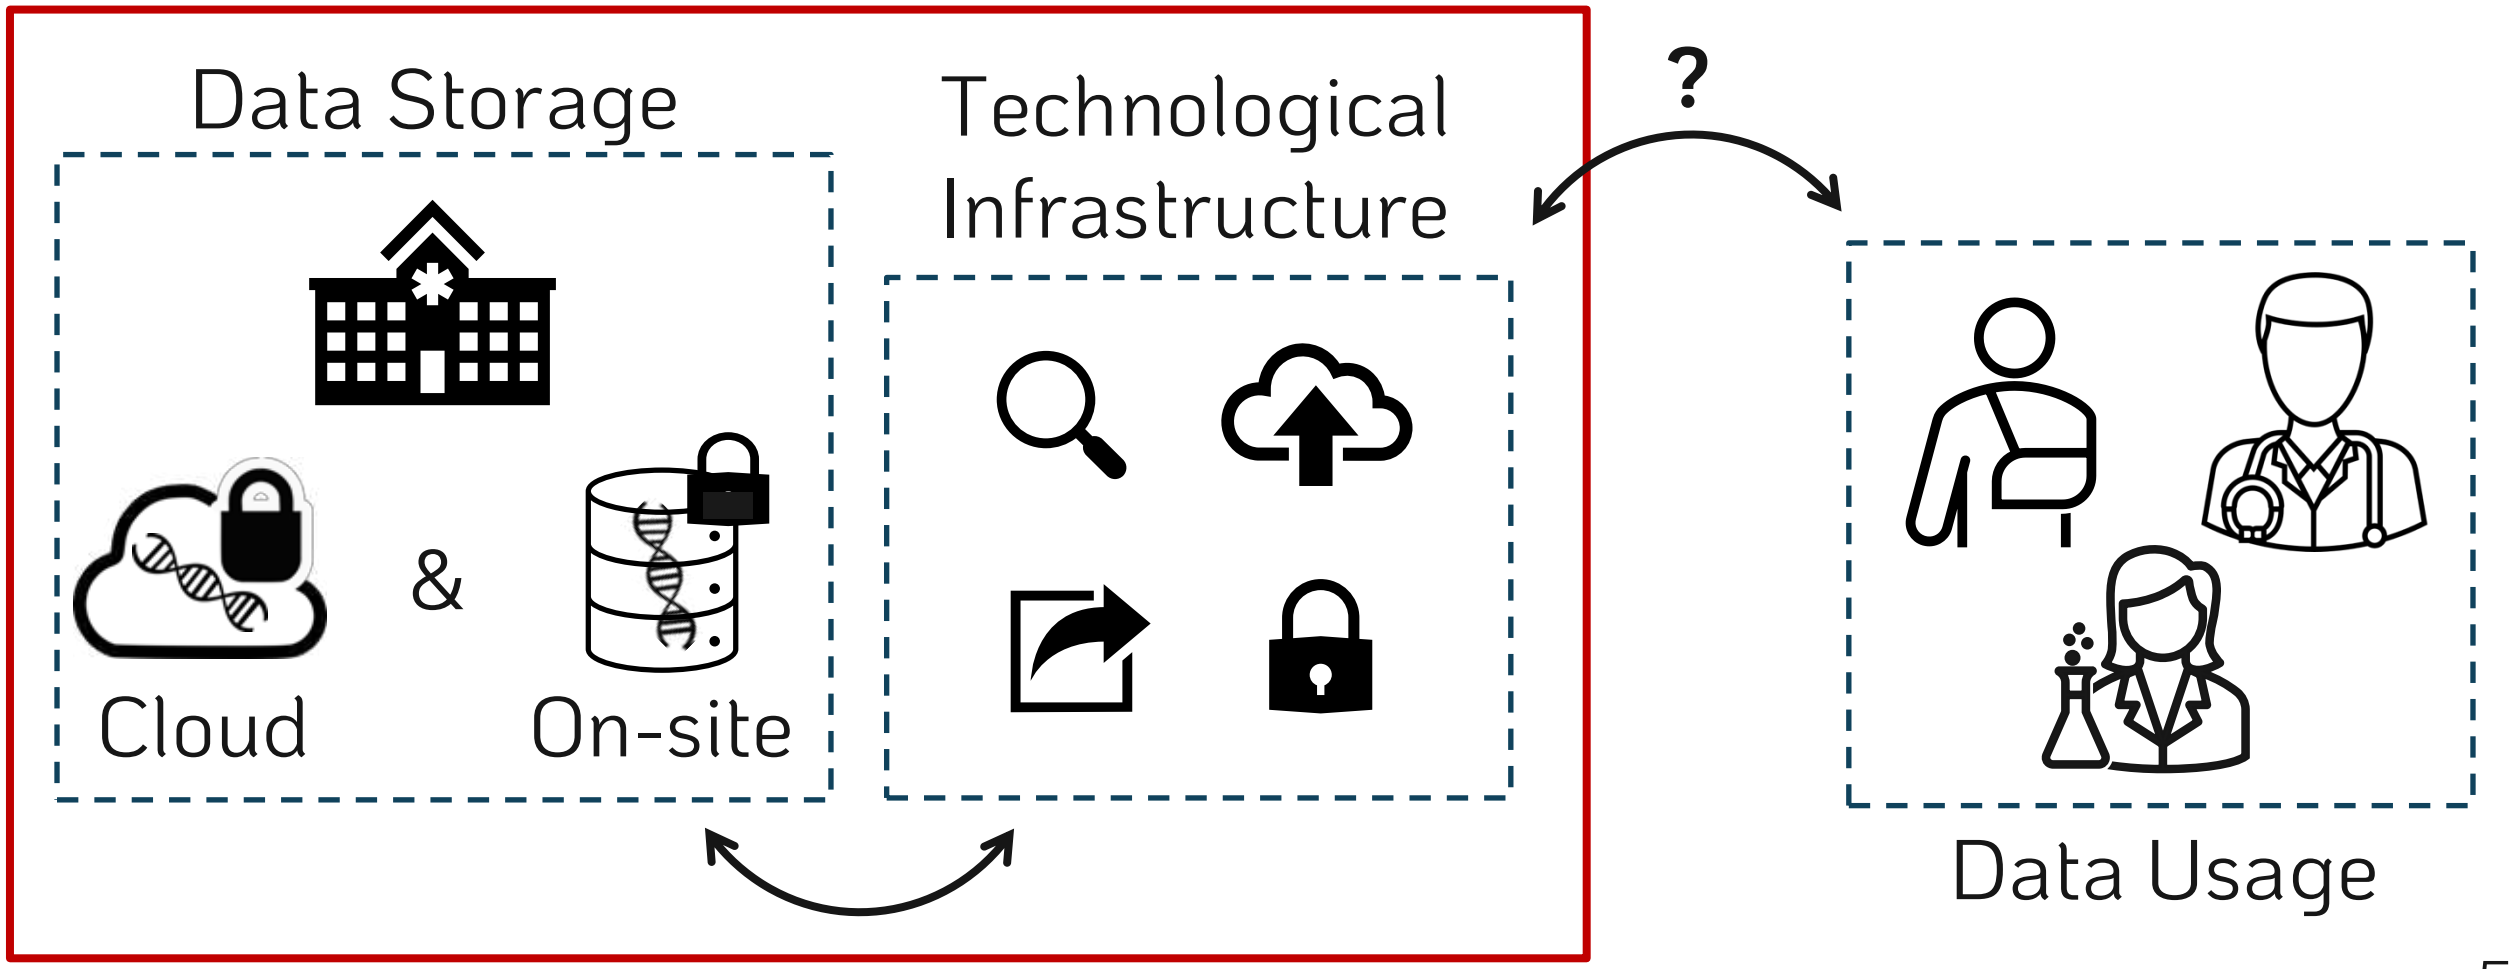

- Storage
- Privacy
- Governance
- Formatting

Bergström et al. SCIENCE 20 Mar 2020.

Semantic Genome Data?

Institution-centric

© Elias Crum 2024

Scaling Genome Data Usage

Research genomic data sharing initiatives:

State-of-the-art for **clinical** genomic data sharing?

GDPR (EU) / HIPPA (US)
EU Health Data Spaces

→ Not much...

© Elias Crum 2024

Solid Technology

- Does not solve ALL problems, but offers an environment where improvements are possible

  - ✓ Easier sharing (web-facilitated)
  - ✓ Granular privacy controls
  - ✓ Direct patient data access
  - ✓ Data representation flexibility (RDF)
  - ✓ Possibility of data-linking and querying

https://solidproject.org/TR/protocol

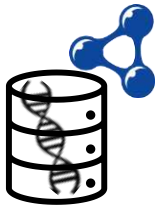

Research Questions

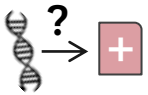

1. Can Solid be implemented for genomic data storage?

What is the impact on data policy enforcement?

2. Can (VCF) genomic data be represented as RDF?

Can genomic and other medical data be linked semantically?

3. Can RDF genomic data be queried in a useful way?

Can this improve genomic data discoverability for researchers?

© Elias Crum 2024

Project Goals

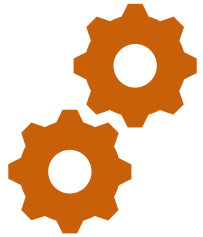

Create a proof-of-concept
storage **FRAMEWORK**
and accompanying **Web Application**

While **exploring representation + querying limits**

© Elias Crum 2024

Project Goals

But wait…

This sounds like an **ENGINEERING** project!

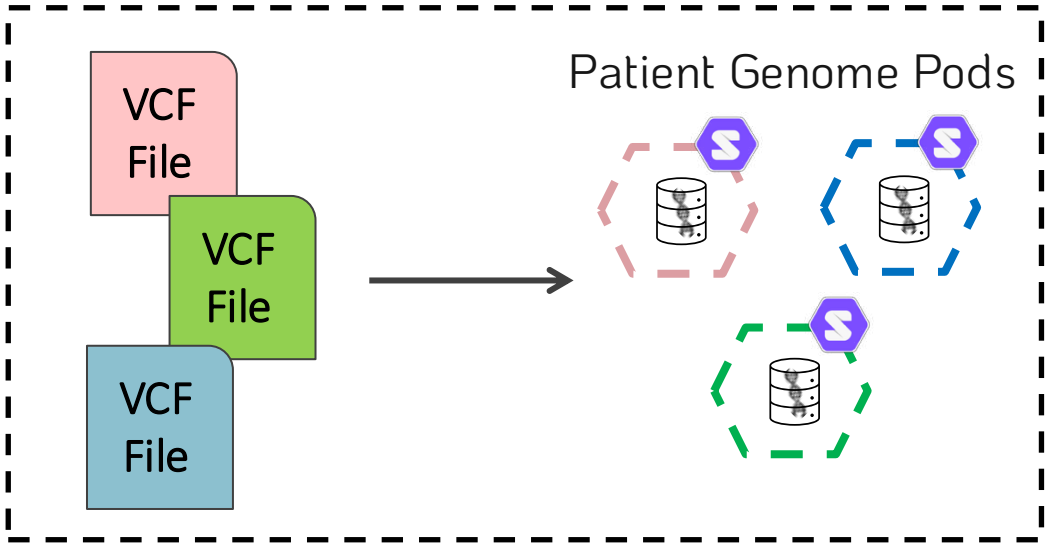

Where is the **RESEARCH**?

© Elias Crum 2024

Workflow Overview

Data Storage

© Elias Crum 2024

Data Storage

Solid can be implemented for genomic data storage.

Solid pod instances → Community Solid Server[1]

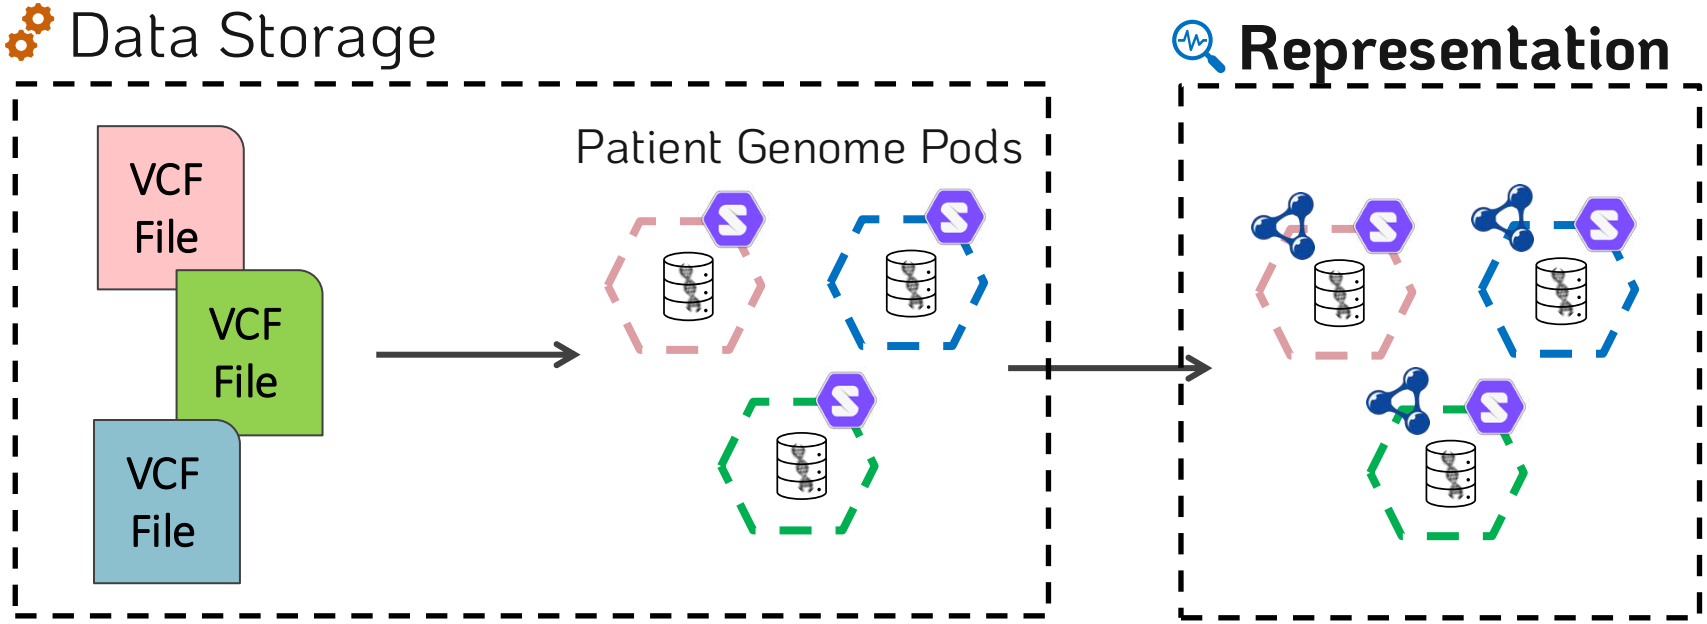

VCF Genomic Data → Illumina Platinum Genomes[2]

[1] https://github.com/CommunitySolidServer/CommunitySolidServer
[2] https://emea.illumina.com/platinumgenomes.html

© Elias Crum 2024

Workflow Overview

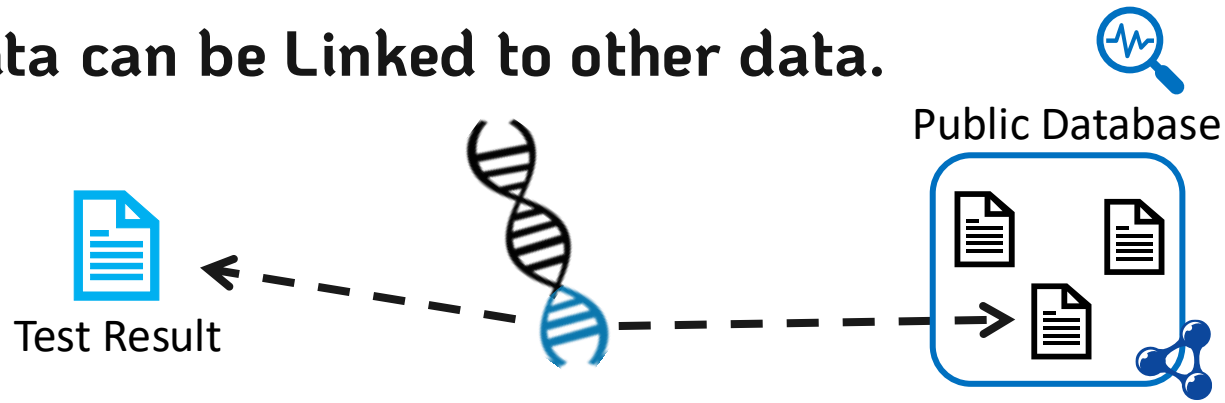

© Elias Crum 2024

Genome Data in RDF

VCF genomic data can be represented as RDF.

VCF to RDF Vocabularies exist ⟶ SPHN Semantic Interoperability Framework[3] + FHIR HL7 Format[4]

VCF genomic data can be Linked to other data.

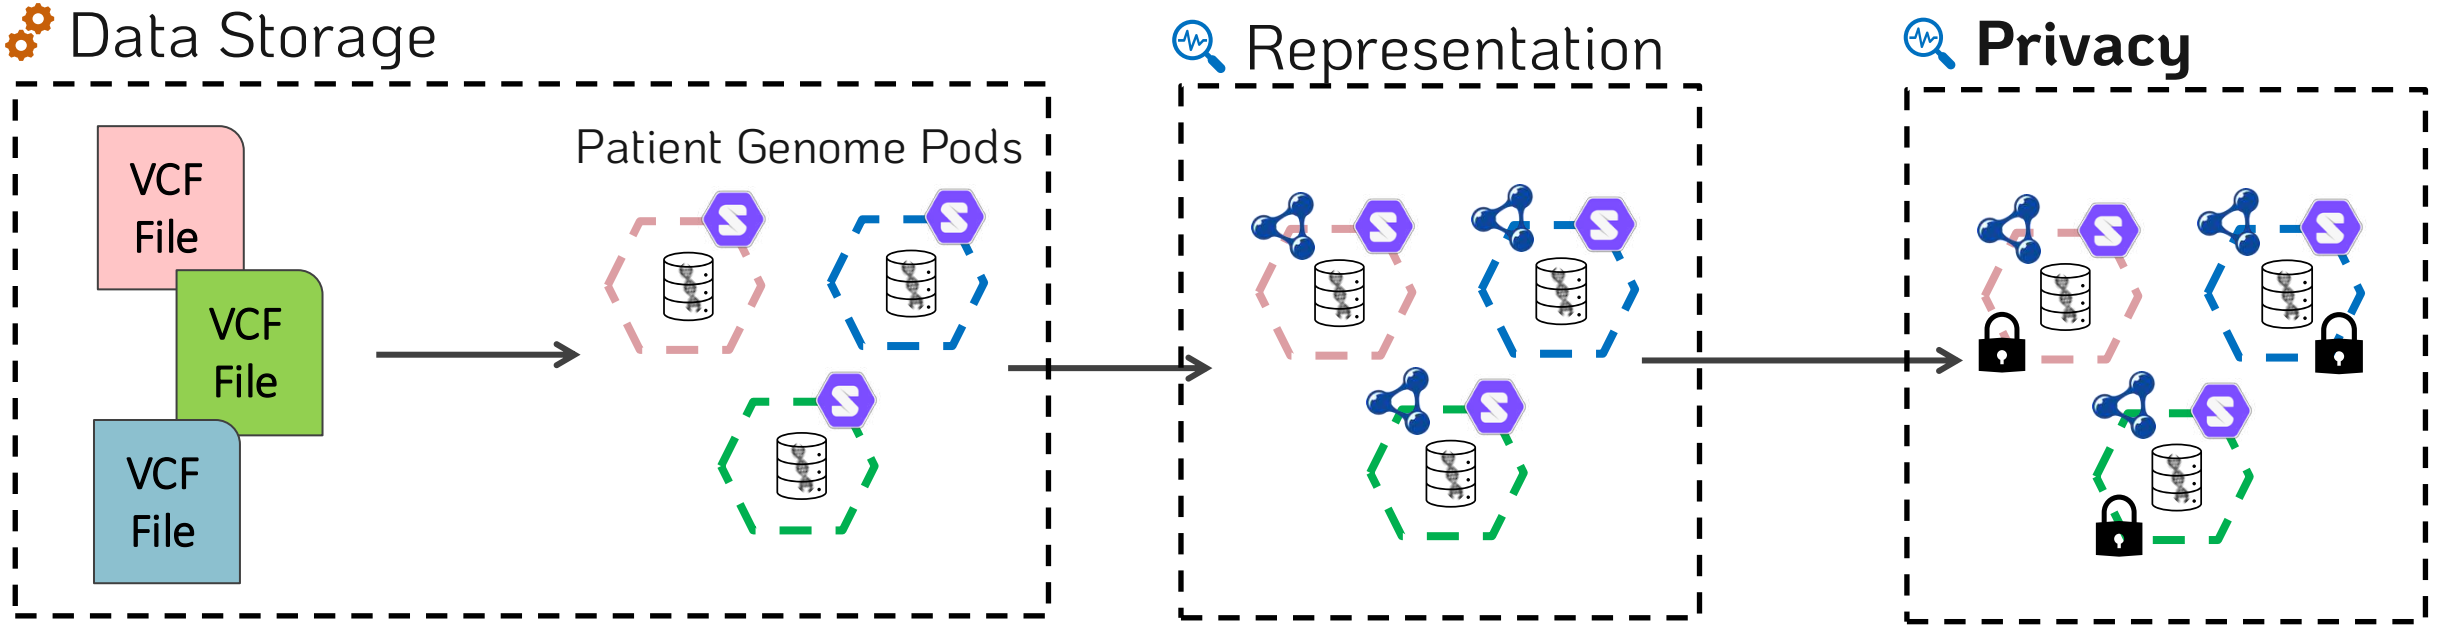

How to automate this?
What vocabularies could be used for the linkages?

© Elias Crum 2024

[4] Dolin RH, et al. vcf2fhir: a utility to convert VCF files into HL7 FHIR format for genomics-EHR integration. 2021.

Workflow Overview

© Elias Crum 2024

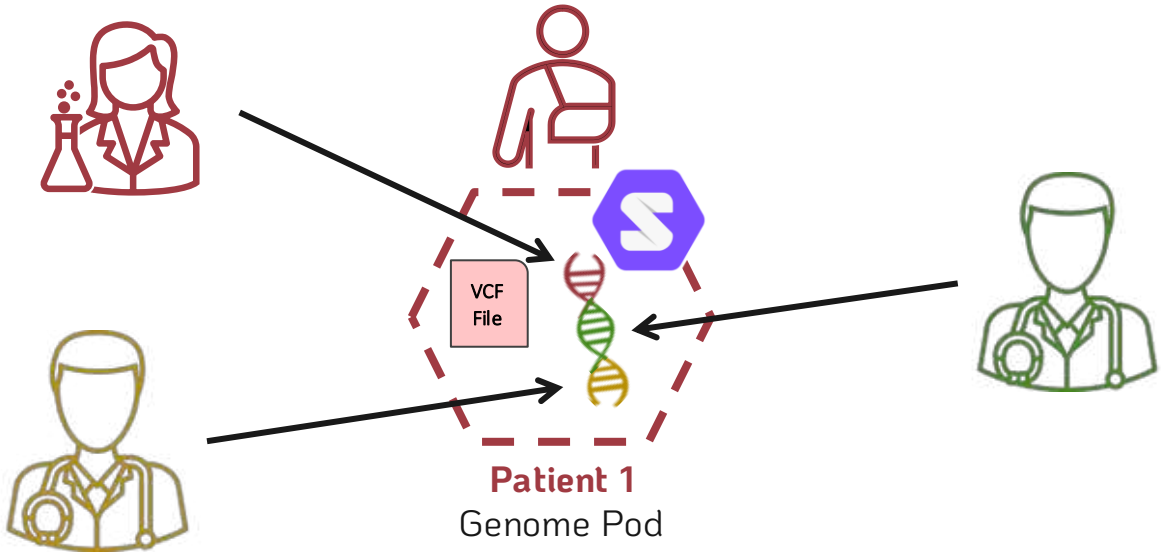

Data Privacy Controls

Granular privacy controls can be implemented in Solid for genomic data.

Web Access Contol ⟶ Solid Protocol ACP[5]

How granular can we make the privacy controls?

Privacy controls at chromosome level, or even mutation level.

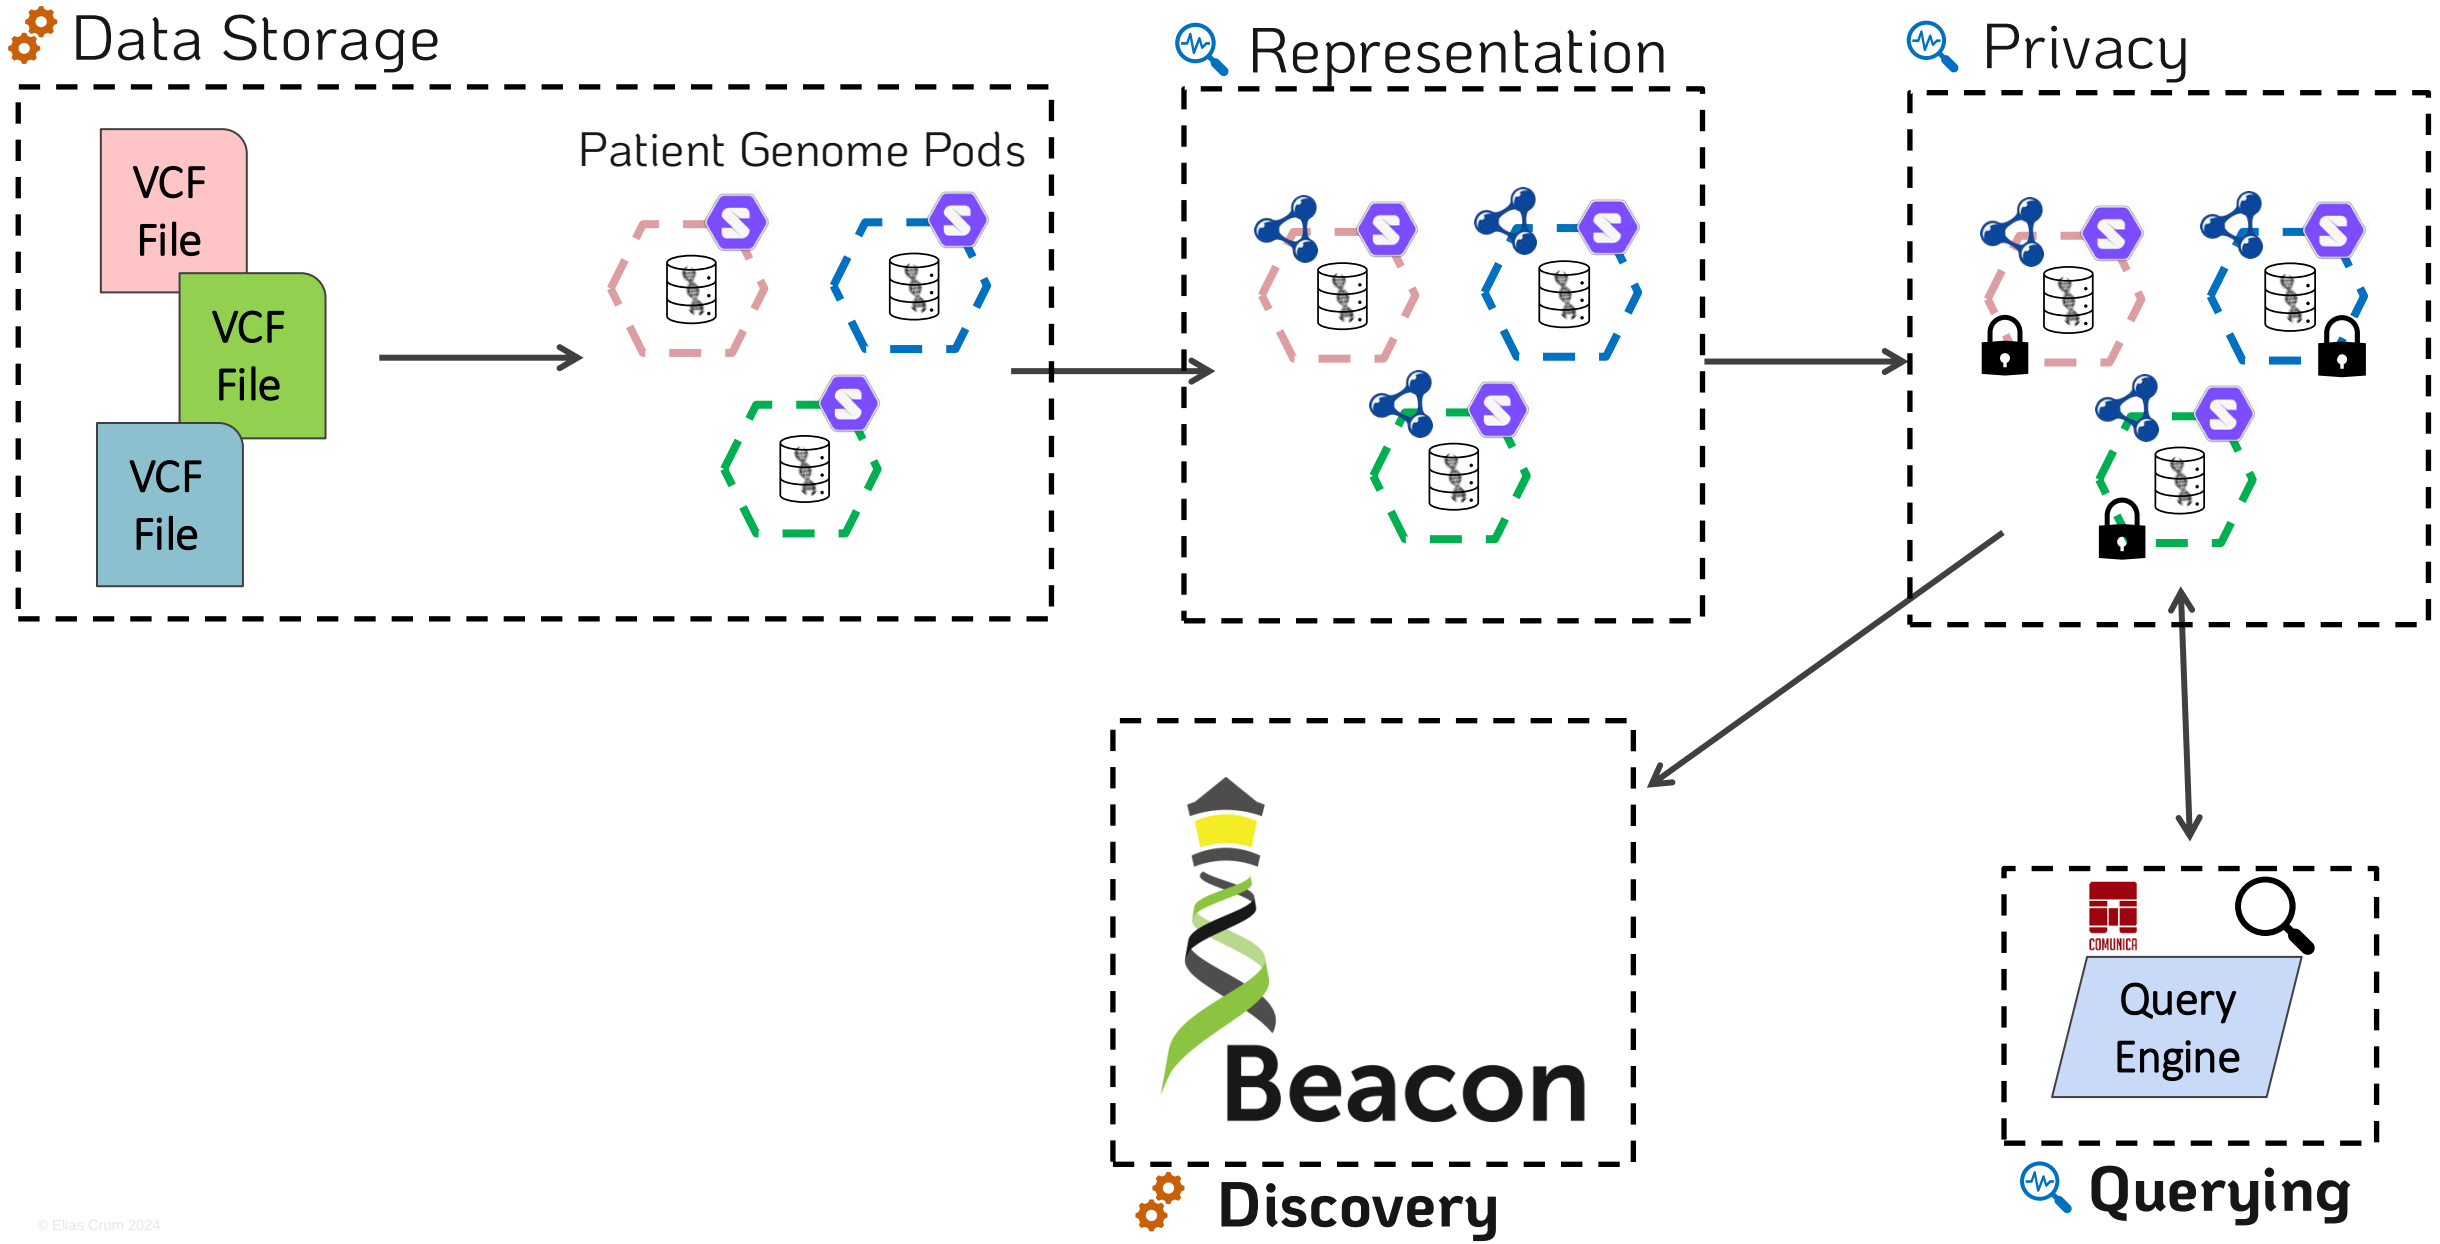

Chromosome is a semantic Class

Mutation is also a semantic Class, above a triple but below a Chromosome

Workflow Overview

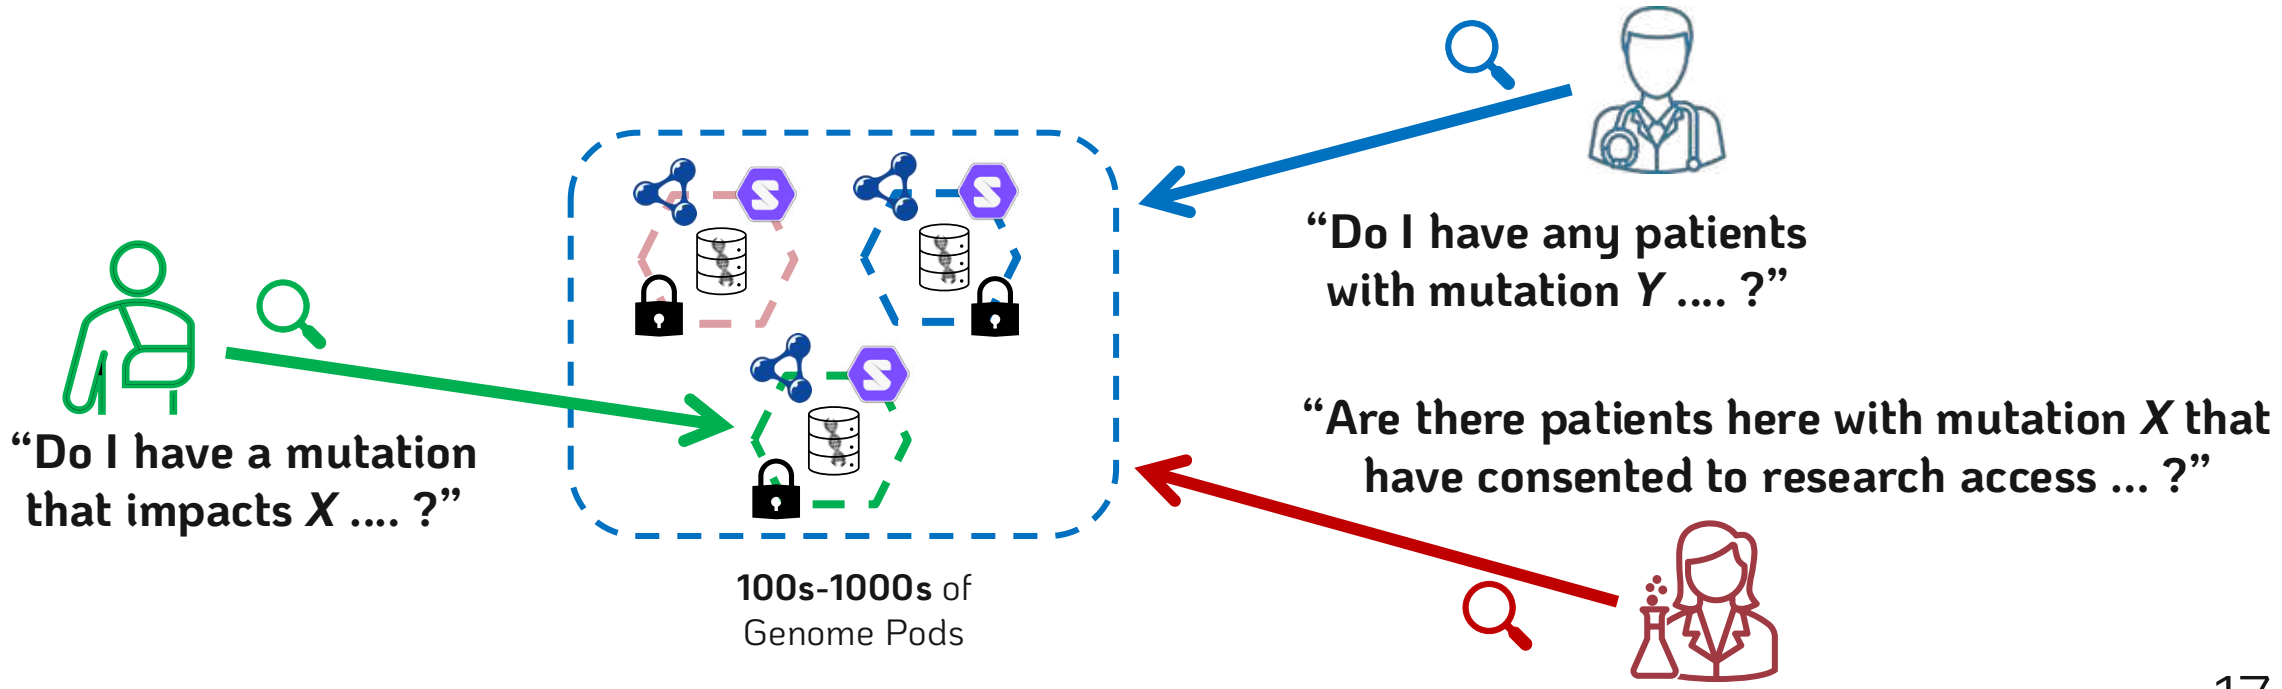

© Elias Crum 2024

Querying Genome Pods

RDF genomic data pods can be queried.

Query Engine → Custom Comunica implementation/engine[6]

[6] https://comunica.dev/

© Elias Crum 2024

PhD Goals

Finished

Soon

Future

Basic Functionalities:

-  Genomic data storage in Solid pods
-  Data privacy management
-  Data Sharing via the web

Experimental research:

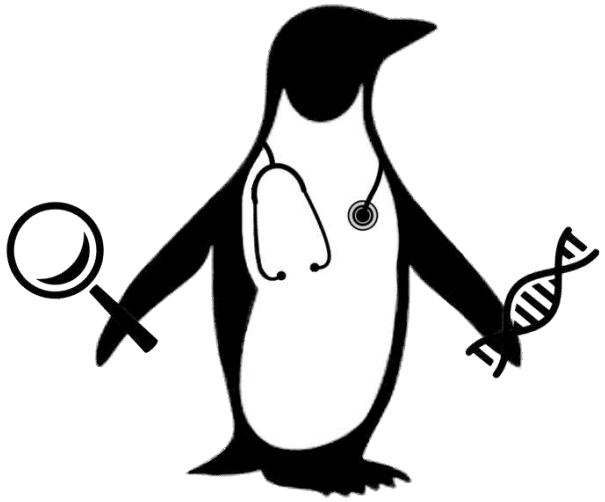

-  Represent genomic data as RDF?
-  Linking genomic and health data?
-  Single and Many pod Querying?

Questions?

Paper

Contact

Workflow Overview

Querying Genome Pods (possibilities)

Single Pod Query

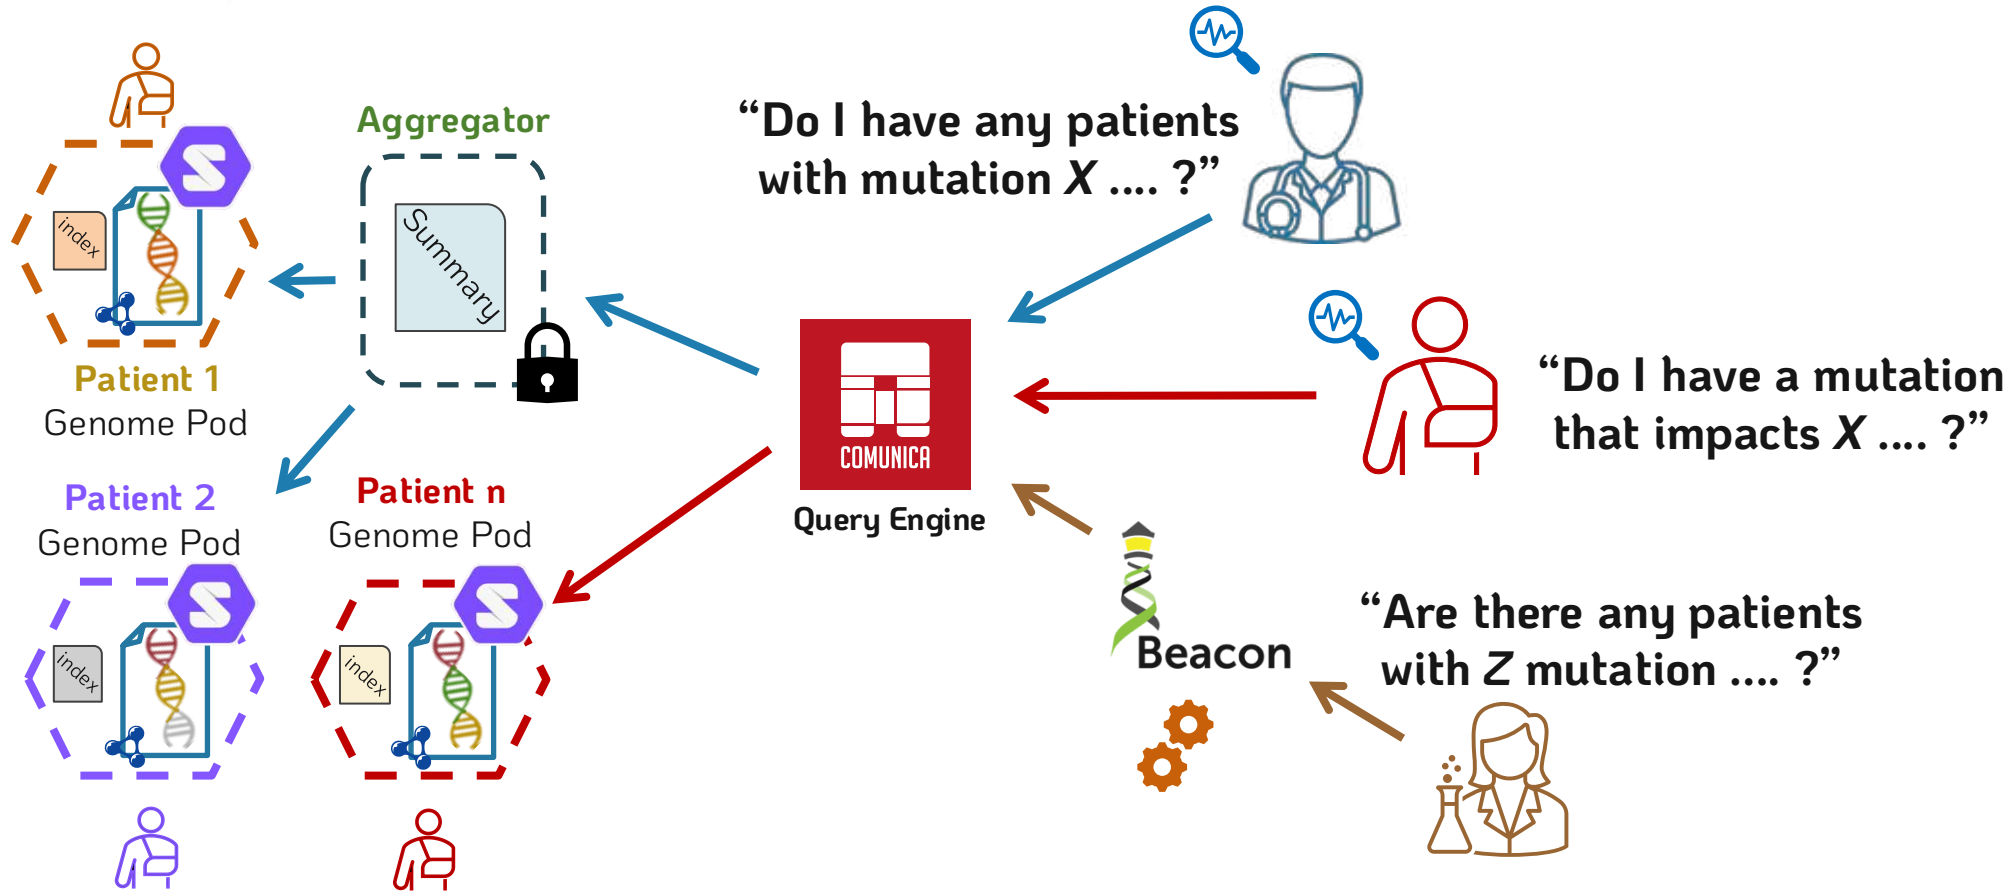

Utilizes an intra-pod index

Many Pod Query

First, utilizes an extra-pod aggregator
Then, utilizes the intra-pod indexes

Beacon API for Researcher Queries

Query is translated from Beacon API to Comunica
Then, the **Many Pod** query approach is followed
